A note from Duality CEO and Co-Founder, Dr. Alon Kaufman

2023 was an important year with some tectonic moves – and the first is obviously AI. The rise of AI brought with it an even greater focus on data – how we utilize it, secure it, and build trust around its usage, especially in a setting of data collaboration. The vital conversation around trust boils down to privacy, security, confidentiality, and compliance, leaving many with more questions than answers. Throughout the past year, we witnessed remarkable strides in state-sponsored initiatives and regulatory frameworks worldwide. These developments underscored the imperative for organizations to fortify their security measures and champion privacy-protected data collaboration.

Fortunately, 2023 was also a stellar year for Duality. We published multiple case studies with organizations (and regulators) that proved that privacy-protected data collaboration solutions, like Duality's, satisfy global regulatory requirements, and address the various trust questions, while providing the breadth of functionality and performance necessary for practical use today. From national security to financial crime and healthcare, we are enabling critical data collaborations that either couldn't be done or required more speed and scale.

As we move into 2024, our commitment to responsible and secure data collaboration remains unshakeable. We're thrilled to be further developing our Secure Collaborative AI and Zero Footprint Investigation solutions, adding seamless integration with unstructured data formats and enhancing our compatibility with data analytics and AI platforms, which will unlock even greater possibilities.

As the CEO of Duality, I'm filled with pride and excitement for what lies ahead. Duality is committed to empowering our customers to leverage queries, analytics, and AI for responsible data collaboration initiatives while upholding the highest standards of security, privacy, and compliance. We're tremendously proud of our team, from R&D to go-to-market, and tremendous thanks to our partners and customers. Thank you all for your continued trust and collaboration!

Best,
Alon

Welcome to 2024 and our first newsletter of the Year.

Upcoming Webinar

The Privacy Imperative for Data and AI

AI is about as disruptive as a technology gets. Join a panel of Duality employees and Debbie Reynolds, privacy policy advocate, data engineer, host “The Data Diva”, and Gary Givental, Chief AI Architect at IBM to discuss distributing your AI at scale while protecting your IP and overcoming IP and data protection hurdles.
